# Q3.2 Test SPARQL online

Connect to

http://dbpedia.org/snorql/ or http://fr.dbpedia.org/sparql or ...

http://wiki.dbpedia.org/Internationalization/Chapters

```
Answers to the query:

SELECT * WHERE {

?x rdfs:label "Paris"@fr .

?x ?p ?v .

}
```

#### Answer

LIMIT 10

```
XP:Paris ©rdf:type ©owl:Thing ©:Paris ©rdf:type ©dbpedia:ontology/Place ©:Paris ©rdf:type ©dbpedia:ontology/Location ©:Paris ©rdf:type ©<http://www.wikidata.org/entity/Q486972> ©:Paris ©rdf:type ©dbpedia:ontology/PopulatedPlace ©:Paris ©rdf:type ©dbpedia:ontology/Settlement ©:Paris ©rdf:type ©<http://www.w3.org/2003/01/geo/wgs84_pos#SpatialThing> ©:Paris ©rdf:type ©<http://schema.org/Place> ©:Paris ©rdf:type ©<http://umbel.org/umbel/rc/Location_Underspecified> ©:Paris ©rdf:type ©<http://umbel.org/umbel/rc/PopulatedPlace> ©
```

# Q3.3 Test SPARQL online

Connect to:

https://query.wikidata.org/

```
What does this query retrieve?
SELECT distinct ?p ?n WHERE
{    wd:Q30 p:P6 [ ps:P6 ?p ].
    ?p rdfs:label ?n .
    FILTER (lang(?n)="en") }
```

Discover wd:Q30 using the namespace attached to wd:

PREFIX wd: <a href="http://www.wikidata.org/entity/">http://www.wikidata.org/entity/</a>

Discover p:P6 using the namespace attached to p:

PREFIX p: <a href="http://www.wikidata.org/prop/">http://www.wikidata.org/prop/>

Find q-name of the property "given name" <a href="https://www.wikidata.org/wiki/Wikidata:List\_of\_properties">https://www.wikidata.org/wiki/Wikidata:List\_of\_properties</a>

#### Answer

- American presidents
- Q30: USA
- P6: head of government
- Given name: P735

Q3.4 SPARQL query to return 20 persons at most (use type foaf:Person)

#### Answer

Select \* where {?x a foaf:Person}

LIMIT 20

Q3.5 SPARQL guery to return 20 persons (at most), after the 10th result i.e. from 11th to 30th

#### Answer

Select \* where {?x a foaf:Person}

LIMIT 20

OFFSET 10

- Q3. 6 You have two properties: c:name and c:age
- 1. Find the age of resources whose name is 'Fabien'
- 2. Find the name of resources whose age is less than 50
- 3. Find property values of resources whose name is 'Fabien' and whose age is less than 50
- 4. Find other names of resources whose name is 'Fabien'
- 5. Find resources which have two different properties with the same value
- 6. Find resources which have the same property with two different values

# Answer

1	Select * where{	
	?age a c:age.	
	?age c:name 'Fabien'.	
	}	
	or	
	Select * where {?age a c:age; c:name 'Fabien'.}	
2	Select ?x where {?x c:name; c:age ?age. filter(?age<50).}	
3	Select ?p ?y where	
	{?x c:name 'Fabien';	
	c:age ?age;	
	?p ?y.	
	filter(?age<50)}	
4	Select ?name where{	
	?x c:name 'Fabien'; ?name. filter(?name != 'Fabien')}	
5	Select ?x where{	

```
?x ?p ?y;?q ?y. filter( ?p != ?q)}

Select ?x where{
    ?x ?p ?y, ?z. filter( ?y != ?z)}
}
```

```
Q3.7 Could this query return ex:a c:memberOf ex:b and why?
```

```
select * where {
   ?x c:memberOf ?org .
   minus { ex:a c:memberOf ex:b }
}
```

#### Answer

Yes because there's no share variable

Q3.8 get the members of organizations (c:memberOf) but remove the resources author of a document (c:author) by using 'not exists'

# Answer

Select \* where{?x c:memberOf ?org. filter(! exist{?x c:author ?doc})

# Q3.9 what is retrieving this query?

```
prefix ex: <http://example.org/>
select ?x (count(?doc) as ?c)
where { ?x ex:author ?doc }
group by ?x
order by desc(count(?doc))
```

#### Answer

count the number of the doc the author produces and the most productive first

Q3.10 What expression should we use to find the ?x related to ?y by paths composed of properties

foaf:knows and/or rdfs: seeAlso?

```
?x (foaf:knows | rdfs:seeAlso)+ ?y
?x foaf:knows+ | rdfs:seeAlso+ ?y
?x (foaf:knows / rdfs:seeAlso)+ ?y
```

#### Answer

The first one, repeat one or several time for (either knows or seeAlso)

# Q3.11 what is this query retrieving?

```
prefix foaf: <http://xmlns.com/foaf/0.1/>
select ?x (if (bound(?n), ?n, "John Doe") as ?m)
where {
   ?x foaf:knows ?y
   optional { ?y foaf:name ?n }
}
```

#### Answer

Select the ?x who has friends (with or without a name) and then if the friend's name is empty we give it John Doe as a name

# Q3.12 what is this query retrieving?

```
prefix ex: <http://example.org/>
select ?x (avg(?a) as ?b)
where {
   ?x ex:knows ?y .
   ?y ex:age ?a
}
group by ?x
```

# Answer

it is asking the average age of your(?x) friend.

Q3.13 You have two properties: c:name and c:study and the

resources c:Informatics and c:Mathematics

- 1. Find resources that study informatics or mathematics
- 2. In addition return the name of the resource if it has a name
- 3. In addition return the graph where the name is given

```
Answer
```

```
1.
SELECT * Where
{{ ?x c:study c: Informatics} union {?x c:study c:Mathematics}}
SELECT *Where
{{ ?x c:study c: Informatics} union {?x c:study c:Mathematics}
Optional { ?x c:name ?name } }
3.
SELECT *Where
{{ ?x c:study c: Informatics} union {?x c:study c:Mathematics}
Optional{graph ?g{?x c:name ?name}}}
Q3.14 On which graph(s) is calculated ?x ?p ?y
On which graph(s) is calculated graph?g {?y?q?z}
prefix ex:
              <http://example.org/>
select *
from ex:q1
from named ex: q2
where {
    ?x ?p ?y .
   graph ?g { ?y ?q ?z} }
Answer
x p y for g1
y q z for g2
```

#### Answer

```
Delete {?x foaf:name ?n}
Insert {?x rdfs:label ?n }
Where {?x foaf:name ?n}
```

# Q3.16 what is this query performing?

```
prefix ex: <http://example.org/>
delete { ?x ex:age ?a }
insert { ?x ex:age ?i }
where {
  select ?x (xsd:integer(?a) as ?i)
  where {
    ?x ex:age ?a
    filter(datatype(?a) = xsd:string)
  }
}
```

Q3.15 Write a guery to change foaf:name into rdfs:label

#### Answer

Every time we find a age as a string, we remove it and replace it with integer

Q3.17 Which clauses could you use to obtained results as RDF triples following a specific pattern?

- SELECT ... WHERE {...} ...
- CONSTRUCT { } WHERE {...} ...

- DESCRIBE <...> DESCRIBE ... {...}
- ASK {...}
- DELETE { ... } INSERT { ... } WHERE {...} ...

#### Answer

CONSTRUCT { } WHERE {...} ...

(note that the insert is constructing too but it also create to the data)

# Day 03: Answers to the practical session on SPARQL.

Software requirements

- The RDF XML online validation service by W3C: https://www.w3.org/RDF/Validator/
- The RDF online translator: http://rdf-translator.appspot.com/
- The SPARQL Corese engine: <a href="http://wimmics.inria.fr/corese">http://wimmics.inria.fr/corese</a>

Basic query on RDF human.rdf

If you haven't done it yet download the SPARQL Corese engine.

On Window double-click the file ".jar". If it does not work or on other platforms, run the command " java -jar - Dfile.encoding=UTF8 " followed by the name of the ".jar" archive. Notice that you need java on your machine and proper path configuration

This interface provides two tabs: (1) one to load input files and see traces of execution, and (2) the default tab to start loading or writing queries and see their result.

If you don't have the human dataset file yet download the following file of annotations and save it as "human.rdf":

http://wimmics.inria.fr/doc/tutorial/human\_2013.rdf

Load the file human.rdf as RDF data in corese.

#### Question 1:

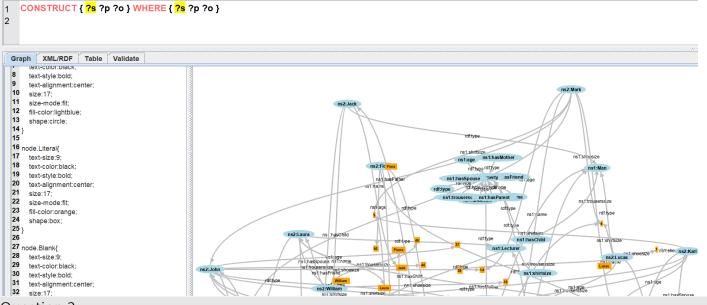

Create a new tab to enter the following query and explain what it does and the results you get. This is a good way to familiarize yourself with the data.

CONSTRUCT { ?s ?p ?o } WHERE { ?s ?p ?o }

#### **Explanation:**

We are extracting all the data from the query to construct the graph

#### Screenshot:

# Question 2:

Create a new tab to enter the following query:

```
prefix h: <http://www.inria.fr/2007/09/11/humans.rdfs#>
select * where { ?x a ?t . filter(strstarts(?t, h:)) }
```

Translate this query in plain English.

Select all the instances/resource and type start with the namespace of h

Run this query. How many answers do you get? 21

Find John and his types in the answers.

John's types:

John is under type person

Question 3:

In the previous answer, locate the URI of John.

1. formulate a SELECT query to find all the properties of John, using his URI Query

select \* where {

<a href="http://www.inria.fr/2007/09/11/humans.rdfs-instances#John">?y?z.}

#### Results:

Graph XML/RDF Table Validate				
num	?z	?y		
1	37	<a href="http://www.inria.fr/2007/09/11/humans.rdfs#age">http://www.inria.fr/2007/09/11/humans.rdfs#age</a>		
2	<a href="http://www.inria.fr/2007/09/11/h">http://www.inria.fr/2007/09/11/h</a>	<a href="http://www.inria.fr/2007/09/11/humans.rdfs#hasParent">http://www.inria.fr/2007/09/11/humans.rdfs#hasParent</a>		
3	John	<a href="http://www.inria.fr/2007/09/11/humans.rdfs#name">http://www.inria.fr/2007/09/11/humans.rdfs#name</a>		
4	12	<a href="http://www.inria.fr/2007/09/11/humans.rdfs#shirtsize">http://www.inria.fr/2007/09/11/humans.rdfs#shirtsize</a>		
5	14	<a href="http://www.inria.fr/2007/09/11/humans.rdfs#shoesize">http://www.inria.fr/2007/09/11/humans.rdfs#shoesize</a>		
6	44	<a href="http://www.inria.fr/2007/09/11/humans.rdfs#trouserssize">http://www.inria.fr/2007/09/11/humans.rdfs#trouserssize</a>		
7	<a href="http://www.inria.fr/2007/09/11/h">http://www.inria.fr/2007/09/11/h</a>	rdf:type		

2. request a description of John using the SPARQL clause for this.

#### Ouerv

DESCRIBE <a href="http://www.inria.fr/2007/09/11/humans.rdfs-instances#John">http://www.inria.fr/2007/09/11/humans.rdfs-instances#John>

#### Results:

#### Question 4

Create a new tab to enter the following query:

```
prefix h: <http://www.inria.fr/2007/09/11/humans.rdfs#>
select * where { ?x h:hasSpouse ?y }
```

Translate this query in plain English.

Extract all the resource who has h:hasSpouse with someone else in their property

Run this query. How many answers do you get? 6

# Question 5:

In the RDF file, find the name of the property that is used to give the shoe size of a person.

1. Deduce a query to extract all the persons (h:Person) with their shoe size.

#### Ouery:

prefix h: <a href="http://www.inria.fr/2007/09/11/humans.rdfs#">http://www.inria.fr/2007/09/11/humans.rdfs#</a>

select \* where { ?x h:shoesize ?y }

# Result:

Graph	Graph XML/RDF Table Validate				
num	?x	?y			
1	<a href="http://www.inria.fr/2007/09/11/humans.rdfs-instances#John">http://www.inria.fr/2007/09/11/humans.rdfs-instances#John</a>				
2	<a href="http://www.inria.fr/2007/09/11/humans.rdfs-instances#Mark">http://www.inria.fr/2007/09/11/humans.rdfs-instances#Mark</a>				
3	<a href="http://www.inria.fr/2007/09/11/humans.rdfs-instances#Gaston">http://www.inria.fr/2007/09/11/humans.rdfs-instances#Gaston</a>				
4	<a href="http://www.inria.fr/2007/09/11/humans.rdfs-instances#Pierre">http://www.inria.fr/2007/09/11/humans.rdfs-instances#Pierre</a>				
5	<a href="http://www.inria.fr/2007/09/11/humans.rdfs-instances#Lucas">http://www.inria.fr/2007/09/11/humans.rdfs-instances#Lucas</a>				
6	<a href="http://www.inria.fr/2007/09/11/humans.rdfs-instances#William">http://www.inria.fr/2007/09/11/humans.rdfs-instances#William</a>				
7	<a href="http://www.inria.fr/2007/09/11/humans.rdfs-instances#Karl">http://www.inria.fr/2007/09/11/humans.rdfs-instances#Karl</a>				

2. Change this query to retrieve all the persons and, if available, their shoe size.

# Query:

```
prefix h: <http://www.inria.fr/2007/09/11/humans.rdfs#>
select * where { ?x a h:Person. optional { ?x h:shoesize ?y.} }
```

# Result:

Grap	Graph XML/RDF Table Validate				
num	?x	?y			
1	<a href="http://www.inria.fr/2007/09/11/humans.rdfs-instances#John">http://www.inria.fr/2007/09/11/humans.rdfs-instances#John&gt;</a>	14			
2	<a href="http://www.inria.fr/2007/09/11/humans.rdfs-instances#Mark">http://www.inria.fr/2007/09/11/humans.rdfs-instances#Mark</a>	8			
3	<a href="http://www.inria.fr/2007/09/11/humans.rdfs-instances#Eve">http://www.inria.fr/2007/09/11/humans.rdfs-instances#Eve</a>				
4	<a href="http://www.inria.fr/2007/09/11/humans.rdfs-instances#David">http://www.inria.fr/2007/09/11/humans.rdfs-instances#David</a>				
5	<a href="http://www.inria.fr/2007/09/11/humans.rdfs-instances#Laura">http://www.inria.fr/2007/09/11/humans.rdfs-instances#Laura</a>

7	<a href="http://www.inria.fr/2007/09/11/humans.rdfs-instances#Karl">http://www.inria.fr/2007/09/11/humans.rdfs-instances#Karl</a>	7			
dl .					

3. Change this query to retrieve all the persons whose shoe size is greater than 8 <u>or</u> whose shirt size is greater than 12.

#### Query:

```
prefix h: <http://www.inria.fr/2007/09/11/humans.rdfs#>
select ?name where {
    ?x h:name ?name
    optional{?x h:shoesize?y}.
    optional{?x h:shirtsize ?z}.
    filter(?y>8 || ?z>12)
}
```

#### Result:

Graph	Graph XML/RDF Table Validate				
num	?x	?name	?y	?z	
1	<http:< td=""><td>John</td><td>14</td><td>12</td></http:<>	John	14	12	
2	<http:< td=""><td>Gaston</td><td>11</td><td>12</td></http:<>	Gaston	11	12	
3	<http:< td=""><td>William</td><td>10</td><td>13</td></http:<>	William	10	13	

# Question 6:

In the RDF file, find the name of the property that is used to indicate the children of a person.

1. Formulate a query to find the parents who have at least one child.

# Query:

```
prefix h: <http://www.inria.fr/2007/09/11/humans.rdfs#>
select ?name where { ?x h:hasChild ?y; h:name ?name }
```

How many answers do you get? How many duplicates do you identify in these responses? 5,1

2. Find a way to avoid duplicates.

# Query:

```
prefix h: <a href="http://www.inria.fr/2007/09/11/humans.rdfs#">http://www.inria.fr/2007/09/11/humans.rdfs#>select distinct ?name where { ?x h:hasChild ?y; h:name ?name } How many answers do you get then? 4
```

3. Rewrite a query to find the Persons who have no child.

# Query:

```
prefix h: <a href="http://www.inria.fr/2007/09/11/humans.rdfs#">http://www.inria.fr/2007/09/11/humans.rdfs#>select distinct ?name where {{?x h:name ?name} minus { ?x h:hasChild ?y}}
```

#### Question 7

In the RDF file, find the name of the property that is used to give the age of a person.

1. Formulate a query to find people with their age.

# Query:

```
prefix h: <http://www.inria.fr/2007/09/11/humans.rdfs#>
select ?name ?age where { ?x h:age ?age; h:name ?name}
```

#### Result:

?name	?age
John	37
Mark	14
Gaston	102
Flora	95
Pierre	71
Lucas	12
William	42

2. Formulate a query to find people who are not adults.

# Query:

```
prefix h: <a href="http://www.inria.fr/2007/09/11/humans.rdfs#">http://www.inria.fr/2007/09/11/humans.rdfs#>select ?name ?age where { ?x h:age ?age; h:name ?name. filter(?age<18)}
```

How many answers do you get? 2

3. Use the appropriate query clause to check if Mark is an adult; use the proper clause statement for this type of query to get a true or false answer.

```
Query: false prefix h: <a href="http://www.inria.fr/2007/09/11/humans.rdfs#">http://www.inria.fr/2007/09/11/humans.rdfs#</a> ask {?x h:name "Mark"; h:age ?age. filter(?age>18)} /or prefix h: <a href="http://www.inria.fr/2007/09/11/humans.rdfs#">http://www.inria.fr/2007/09/11/humans.rdfs#</a> select * where {?x h:name "Mark"; h:age ?age. BIND((?age>18) as ?adult)}
```

4. Write a query that indicates for each person if her age is even (true or false).

#### Onerv

```
prefix h: <a href="http://www.inria.fr/2007/09/11/humans.rdfs#> select * where {
```

?x h:name ?name; h:age ?age.

BIND((?age/2=floor(?age/2)) as ?even)}

	?x	?name	2000	
num	· · · · · · · · · · · · · · · · · · ·	?name	?age	
1	<a href="http://www.inria.fr/2007/0">http://www.inria.fr/2007/0</a>	John	37	false
2	<a href="http://www.inria.fr/2007/0">http://www.inria.fr/2007/0</a>	Mark	14	true
3	<a href="http://www.inria.fr/2007/0">http://www.inria.fr/2007/0</a>	Gaston	102	true
4	<a href="http://www.inria.fr/2007/0">http://www.inria.fr/2007/0</a>	Flora	95	false
5	<a href="http://www.inria.fr/2007/0">http://www.inria.fr/2007/0</a>	Pierre	71	false
6	<a href="http://www.inria.fr/2007/0">http://www.inria.fr/2007/0</a>	Lucas	12	true
7	<a href="http://www.inria.fr/2007/0">http://www.inria.fr/2007/0</a>	William	42	true

# Question 8

1. <u>Construct</u> the symmetric of all hasFriend relations using the good SPARQL statement (ex. When finding Thomas hasFriend Fabien, your query should construct Fabien hasFriend Thomas)

# Query:

```
prefix h: <http://www.inria.fr/2007/09/11/humans.rdfs#>
construct {?x h:hasFriend ?y}
where {?y h:hasFriend ?x}
```

2. <u>Insert</u> the symmetric of all hasFriend relations using the adequate SPARQL statement but check the results with a select query before and after.

Before there is 6, after insert there is 12 lines

# Query:

```
prefix h: <http://www.inria.fr/2007/09/11/humans.rdfs#>
INSERT {?x h:hasFriend ?y}
where {?y h:hasFriend ?x}
```

#### Question 9

Choose and edit one of the SELECT WHERE queries previously written to transform them into a CONSTRUCT WHERE query (retaining the same WHERE clause) in order to visualize the results as a graph.

# Query:

```
prefix h: <a href="http://www.inria.fr/2007/09/11/humans.rdfs#">http://www.inria.fr/2007/09/11/humans.rdfs#>http://www.inria.fr/2007/09/11/humans.rdfs#>http://www.inria.fr/2007/09/11/humans.rdfs#>http://www.inria.fr/2007/09/11/humans.rdfs#>http://www.inria.fr/2007/09/11/humans.rdfs#>http://www.inria.fr/2007/09/11/humans.rdfs#>http://www.inria.fr/2007/09/11/humans.rdfs#>http://www.inria.fr/2007/09/11/humans.rdfs#>http://www.inria.fr/2007/09/11/humans.rdfs#>http://www.inria.fr/2007/09/11/humans.rdfs#>http://www.inria.fr/2007/09/11/humans.rdfs#>http://www.inria.fr/2007/09/11/humans.rdfs#>http://www.inria.fr/2007/09/11/humans.rdfs#>http://www.inria.fr/2007/09/11/humans.rdfs#>http://www.inria.fr/2007/09/11/humans.rdfs#>http://www.inria.fr/2007/09/11/humans.rdfs#>http://www.inria.fr/2007/09/11/humans.rdfs#>http://www.inria.fr/2007/09/11/humans.rdfs#>http://www.inria.fr/2007/09/11/humans.rdfs#>http://www.inria.fr/2007/09/11/humans.rdfs#>http://www.inria.fr/2007/09/11/humans.rdfs#>http://www.inria.fr/2007/09/11/humans.rdfs#>http://www.inria.fr/2007/09/11/humans.rdfs#>http://www.inria.fr/2007/09/11/humans.rdfs#>http://www.inria.fr/2007/09/11/humans.rdfs#>http://www.inria.fr/2007/09/11/humans.rdfs#>http://www.inria.fr/2007/09/11/humans.rdfs#>http://www.inria.fr/2007/09/11/humans.rdfs#>http://www.inria.fr/2007/09/11/humans.rdfs#>http://www.inria.fr/2007/09/11/humans.rdfs#>http://www.inria.fr/2007/09/11/humans.rdfs#>http://www.inria.fr/2007/09/11/humans.rdfs#>http://www.inria.fr/2007/09/11/humans.rdfs#>http://www.inria.fr/2007/09/11/humans.rdfs#>http://www.inria.fr/2007/09/11/humans.rdfs#>http://www.inria.fr/2007/09/11/humans.rdfs#>http://www.inria.fr/2007/09/11/humans.rdfs#>http://www.inria.fr/2007/09/11/humans.rdfs#>http://www.inria.fr/2007/09/11/humans.rdfs#>http://www.inria.fr/2007/09/11/humans.rdfs#>http://www.inria.fr/2007/09/11/humans.rdfs#>http://www.inria.fr/2007/09/11/humans.rdfs#>http://www.inria.fr/2007/09/11/humans.rdfs#>http://www.inria.fr/2007/09/11/humans.rdfs#>http://www.inria.fr/2007/09/11/humans.rdfs#>ht
```

#### Result:

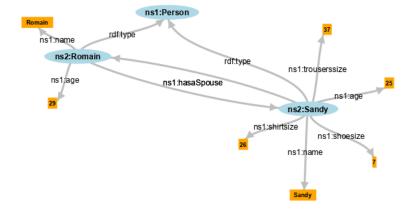

#### Question 10

Edit the file to add your own annotation (about you) to the RDF file reusing the properties of the file. Build queries to verify and visualize the annotations you added.

describe < <a href="http://www.inria.fr/2007/09/11/humans.rdfs-instances#Sandy">http://www.inria.fr/2007/09/11/humans.rdfs-instances#Romain</a>

screenshots:

# Question 11

1. Formulate a query to find the persons who share the same shirt size.

```
Query:
prefix h: <a href="http://www.inria.fr/2007/09/11/humans.rdfs#>select * where{"http://www.inria.fr/2007/09/11/humans.rdfs#>"http://www.inria.fr/2007/09/11/humans.rdfs#>"http://www.inria.fr/2007/09/11/humans.rdfs#>"http://www.inria.fr/2007/09/11/humans.rdfs#>"http://www.inria.fr/2007/09/11/humans.rdfs#>"http://www.inria.fr/2007/09/11/humans.rdfs#>"http://www.inria.fr/2007/09/11/humans.rdfs#>"http://www.inria.fr/2007/09/11/humans.rdfs#>"http://www.inria.fr/2007/09/11/humans.rdfs#>"http://www.inria.fr/2007/09/11/humans.rdfs#>"http://www.inria.fr/2007/09/11/humans.rdfs#>"http://www.inria.fr/2007/09/11/humans.rdfs#>"http://www.inria.fr/2007/09/11/humans.rdfs#>"http://www.inria.fr/2007/09/11/humans.rdfs#>"http://www.inria.fr/2007/09/11/humans.rdfs#>"http://www.inria.fr/2007/09/11/humans.rdfs#>"http://www.inria.fr/2007/09/11/humans.rdfs#>"http://www.inria.fr/2007/09/11/humans.rdfs#>"http://www.inria.fr/2007/09/11/humans.rdfs#>"http://www.inria.fr/2007/09/11/humans.rdfs#>"http://www.inria.fr/2007/09/11/humans.rdfs#>"http://www.inria.fr/2007/09/11/humans.rdfs#>"http://www.inria.fr/2007/09/11/humans.rdfs#>"http://www.inria.fr/2007/09/11/humans.rdfs#>"http://www.inria.fr/2007/09/11/humans.rdfs#>"http://www.inria.fr/2007/09/11/humans.rdfs#>"http://www.inria.fr/2007/09/11/humans.rdfs#>"http://www.inria.fr/2007/09/11/humans.rdfs#>"http://www.inria.fr/2007/09/11/humans.rdfs#>"http://www.inria.fr/2007/09/11/humans.rdfs#>"http://www.inria.fr/2007/09/11/humans.rdfs#>"http://www.inria.fr/2007/09/11/humans.rdfs#>"http://www.inria.fr/2007/09/11/humans.rdfs#>"http://www.inria.fr/2007/09/11/humans.rdfs#>"http://www.inria.fr/2007/09/11/humans.rdfs#>"http://www.inria.fr/2007/09/11/humans.rdfs#>"http://www.inria.fr/2007/09/11/humans.rdfs#>"http://www.inria.fr/2007/09/11/humans.rdfs#>"http://www.inria.fr/2007/09/11/humans.rdfs#>"http://www.inria.fr/2007/09/11/humans.rdfs#>"http://www.inria.fr/2007/09/11/humans.rdfs#>"http://www.inria.fr/2007/09/11/humans.rdfs#>"http://www.inria.fr/2007/09/11/humans.rdfs#>"http://www.inria.fr/2007/
```

2. Find the persons who have the same size shirt and construct a seeAlso relationship between them.

```
Query:
```

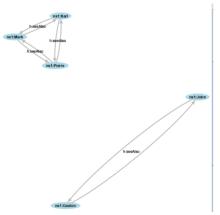

```
prefix h: <a href="http://www.inria.fr/2007/09/11/humans.rdfs#>construct {?x h:seeAlso ?y} where {?y h:shirtsize ?s. ?x h:shirtsize ?s. filter(?x!=?y)}
```

3. Change the query into an insert.

```
prefix h: <http://www.inria.fr/2007/09/11/humans.rdfs#>
insert {?x h:seeAlso ?y}
where{?y h:shirtsize ?s.
?x h:shirtsize ?s.
Filter(?x!=?y)}
```

4. Visualize the resources connected by seeAlso (use the CONSTRUCT clause). screenshot:

```
prefix h: <http://www.inria.fr/2007/09/11/humans.rdfs#>
construct {?x h:seeAlso ?y}
where {?x h:seeAlso ?y}
```

5. Adapt the first query to find persons who have the same shoe size and insert a seeAlso relationship between them.

#### Query:

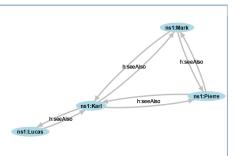

prefix h: <http://www.inria.fr/2007/09/11/humans.rdfs#>
insert {?x h:seeAlso ?y}

where {?y h: shoesize ?s.

?x h:shoesize ?s.

Filter(?x!=?y)}

6. Visualize the resources connected by seeAlso (use the CONSTRUCT clause) screenshot:

7. Change the query to find the resources connected by a path consisting of one or several seeAlso relationships.

#### Query:

prefix h: <http://www.inria.fr/2007/09/11/humans.rdfs#>
select distinct ?x where{ ?x h:seeAlso ?y}

8. Reload the engine (option reload in the menu) and rerun the last visualization query.

# Question 12

1. Find the largest shoe size

# Query:

prefix h: <a href="http://www.inria.fr/2007/09/11/humans.rdfs#">http://www.inria.fr/2007/09/11/humans.rdfs#</a>

```
select (max(?shoe) as ?max) where {?x h:shoesize ?shoe}
```

2. Find people who have the biggest size of shoe (subquery + aggregate)

```
Query:
```

```
prefix h: <a href="http://www.inria.fr/2007/09/11/humans.rdfs#>
select ?name{
{ select (max(?shoe) as ?max) where {?x h:shoesize ?shoe}}
?x h:shoesize ?max
?x h:name ?name
```

3. Calculate the average shoe size using the appropriate aggregation operator

#### Query:

```
prefix h: <a href="http://www.inria.fr/2007/09/11/humans.rdfs#">http://www.inria.fr/2007/09/11/humans.rdfs#</a>
select (AVG(?shoe) as ?avg) where {?x h:shoesize ?shoe}
```

4. Check the average with your own calculation using sum () and count ()

#### Query:

```
prefix h: <a href="http://www.inria.fr/2007/09/11/humans.rdfs#">http://www.inria.fr/2007/09/11/humans.rdfs#</a>>
select (count(?x)as ?count) (sum(?shoe) as ?sum) (?sum/?count as ?avg)
where {?x h:shoesize ?shoe}
```

#### Question 13

Find couples without children

# Query:

```
prefix h: <a href="http://www.inria.fr/2007/09/11/humans.rdfs#">http://www.inria.fr/2007/09/11/humans.rdfs#</a>
select *where {{?x h:hasSpouse ?spouse} minus {?x h:hasChild ?child}}
```

#### Question 14

Using INSERT DATA, create a new person with its properties. Then, check that it has been created.

#### Insert:

```
prefix h: <a href="http://www.inria.fr/2007/09/11/humans.rdfs#">http://www.inria.fr/2007/09/11/humans.rdfs#</a>
prefix instance: <a href="http://www.inria.fr/2007/09/11/humans.rdfs-instances#">http://www.inria.fr/2007/09/11/humans.rdfs-instances#</a>
Insert DATA{instance:Sandy h:name "Sandy"; h:age 25}
```

### Screenshot result:

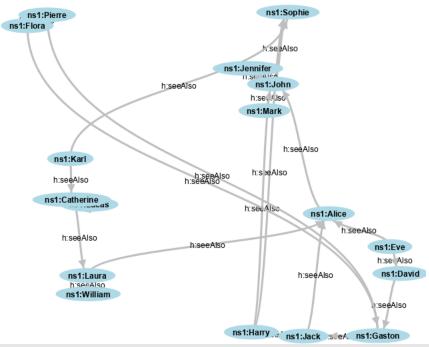

Graph 2	(ML/RDF Table Validate	
num	?z	?y
1	25	<a href="http://www.inria.fr/2007/09/11/humans.rdfs#age">http://www.inria.fr/2007/09/11/humans.rdfs#age</a>
2	Sandy	<a href="http://www.inria.fr/2007/09/11/humans.rdfs#name">http://www.inria.fr/2007/09/11/humans.rdfs#name</a>

#### Question 15

Find the people connected by paths of any family links. Construct an arc seeAlso between them to visualize the result.

```
query:
```

```
prefix h: <a href="http://www.inria.fr/2007/09/11/humans.rdfs#">http://www.inria.fr/2007/09/11/humans.rdfs#</a>
insert {?x h:seeAlso ?z}
where {?x ?y ?z. filter(strstarts(?y, h:has))}
     screenshot:
```

#### Question 16

select \* where {
 ?x db:spouse ?y .

```
Run the following query:
prefix db: <http://dbpedia.org/ontology/>
prefix foaf: <http://xmlns.com/foaf/0.1/>
prefix h: <http://www.inria.fr/2007/09/11/humans.rdfs#>
construct { ?x h:name ?nx . ?y h:name ?ny . ?x h:hasSpouse ?y }
where {
   service <http://fr.dbpedia.org/sparql/> {
        select * where {
           ?x db:spouse ?y .
           ?x foaf:name ?nx .
           ?y foaf:name ?ny .
        limit 20
   }
Explain what it does
    It's constructing the graph, from our local to remote connect to <a href="http://fr.dbpedia.org/sparql/">http://fr.dbpedia.org/sparql/</a> and to query
    inside this dbpedia to construct the graph of { ?x h:name ?nx . ?y h:name ?ny . ?x
    h:hasSpouse?y } With the top 20 data
modify it to <u>insert</u> new persons in the base and check the results.
prefix db: <a href="http://dbpedia.org/ontology/">http://dbpedia.org/ontology/>
prefix foaf: <a href="http://xmlns.com/foaf/0.1/">http://xmlns.com/foaf/0.1/>
prefix h: <a href="http://www.inria.fr/2007/09/11/humans.rdfs#">http://www.inria.fr/2007/09/11/humans.rdfs#</a>
Insert { ?x h:name ?nx . ?y h:name ?ny . ?x h:hasSpouse ?y }
where {
 service <a href="http://fr.dbpedia.org/sparql/">http://fr.dbpedia.org/sparql/</a> {
```

```
?x foaf:name ?nx .
?y foaf:name ?ny .
}
limit 20
}
```
